Notes, Hints & Tips

- Scrub the inside of the box with a dry brush (Nesting Boxes are not water resistant). A clean nesting box encourages your birds to nest again.
- Make sure you place your nesting box undercover in a location where the target bird species is likely to reside. Before placing your box, research their nest height and habitat.
- Nesting boxes need to be placed undercover as they are not waterproof.
- Finch nest boxes require dry nesting grass or coconut fibre to line the inside of nest box.
