SUITABILITY GUIDE

Notes, Hints & Tips

- Remove the bird bath after each use to prevent them from drinking bath water.
- Clean the bird bath with warm water after each use. Do not use detergents or bleaches. If chemical cleaning is required use a bird safe cage cleaner.
- In warm weather your bird should bathe daily but in cooler weather 2 or 3 baths a week should be sufficient.
- To protect your bird from drafts after bathing, cover the cage with a cage cover. Remember to remove the cover after the necessary period of time.
- Some birds can be timid about their new bird bath, place a small treat in the bath where he/she will have to go in and reach it. When your bird becomes comfortable with their bath, the treat will no longer be necessary.
